The Operational Realities of DNSSEC

Panel Discussion
April 2013

Panel Discussion

- Now that DNSSEC has become an operational norm for many registries, registrars, and ISPs, what have we learned about how we manage DNSSEC?

- What's best practice around key rollovers? How often do you review your disaster recovery procedures?

- Is there operational familiarity within your customer support teams?

- Has DNSSEC made DNS more 'brittle' or is it just a run-of-the-mill operational practice?

Panel Discussion

- What operational statistics have we gathered about DNSSEC?

- Is it changing DNS patterns?

- How are our nameservers handling DNSSEC traffic? Is the volume as expected?

- Have we seen anything unusual?

- Are there experiences being documented in the form of best practices, or something similar, for transfer of signed zones?
