

# DNSSEC: Regulative, Legislative and Persuasive Approaches to Encouraging Deployment

Panel Discussion  
April 2013

# Panel Discussion

- **There are many models in discussion for encouraging the take-up of DNSSEC amongst TLDs.**
- **In some jurisdictions we have seen governmental edicts insisting that DNSSEC is deployed across a Top Level Domain.**
- **In others, we have seen reports produced for governments highlighting the lack of take up and the need for tighter control amongst operators.**

# Panel Discussion

- **Recently, we have witnessed the consideration of mandated DNSSEC signing of zones by some TLDs in order to gain access to newer premium domains.**
- **Have any of these approaches worked in encouraging take up of DNSSEC?**
- **What role does a national government have in assisting deployment of DNSSEC?**
- **How are some of these measures perceived by registrars, DNS operators, ISPs and registrants?**
