## High level summary of GNSO Policy Processes

	Policy Development Process (PDP)	Expedited Policy Development Process (EPDP)	GNSO Guidance Process (GGP)	GNSO Input Process (GIP)
Scope	The intended outcome of the PDP is <b>expected to create new “Consensus Policy”</b> recommendations including, but not limited to, any new contractual obligations for contracted parties. For further information concerning what is in scope for “Consensus Policy”, please see: <a href="http://gns0.icann.org/en/basics/consensus-policy/about">http://gns0.icann.org/en/basics/consensus-policy/about</a> .	An EPDP may be initiated by the GNSO Council only in the following specific circumstances: (1) <b>to address a narrowly defined policy issue that was identified and scoped after either the adoption of a GNSO policy recommendation</b> by the ICANN Board or the implementation of such an adopted recommendation; or (2) <b>to provide new or additional policy recommendations on a specific policy issue that had been substantially scoped previously</b> , such that extensive, pertinent background information already exists, e.g. (a) in an Issue Report for a possible PDP that was not initiated; (b) as part of a previous PDP that was not completed; or (c) through other projects such as a GGP.	A GGP may be initiated by the GNSO Council <b>when a request for input relating to gTLDs (either a new issue or in relation to previous policy recommendations)</b> has been received from the ICANN Board or a gTLD issue has been identified by the GNSO Council that would benefit from GNSO Guidance, and it has determined that the intended outcome of the GGP <b>is not expected to create new “Consensus Policy”</b> recommendations including, but not limited to, any new contractual obligations for contracted parties (in which case a PDP would need to be initiated). However, the GGP may provide interpretation or assist in providing clarity with regards to the implementation of GNSO policy recommendations.	A GIP is the process through which the GNSO <b>provides input on matters that may not involve gTLD policy</b> , for example in response to a request from the ICANN Board or in response to a public comment forum as further described in this GIP Manual. Any such requests should include as much information as possible.  A GIP may be initiated by the GNSO Council at any time it considers appropriate, for example, when a request for GNSO input is received from the ICANN Board or other entity that does not involve the creation of new obligations for ICANN contracted parties and does not relate to a topic otherwise suitable for a GNSO Policy Development Process or GNSO Guidance Process, for example providing GNSO Input to a public comment forum.
Request for Issue Report (PDP) / Request for	A request for an Issue Report may be initiated upon Board,	The request to initiate an EPDP must be accompanied by an	The request to initiate a GGP, a GNSO Council member must	To initiate a GIP, a GNSO Council member must submit a request
