Hello Mason

Further to our recent e-mail exchange on the issue scoping work on the EWG report on future registry services (requested by Board Resolution of 26 April):

- The GAC Quick Look Committee (including the GAC Chair) wishes to note that there is standing GAC advice that appears to be relevant to this matter, namely the GAC Principles regarding gTLD WHOIS Services (March 2007 - attached).
 - Can you or relevant ICANN staff (not sure of protocol here so I have copied Olof, plus Marika and Glen as the only GNSO support staff I know!) please ensure that the Principles are drawn to the attention of staff involved in drafting the paper (I appreciate the Principles may already be known to staff, but just to follow the agreed process).
- We will arrange for the GAC to be notified of the forthcoming publication of the paper and the Committee's preliminary view on public policy aspects of the issues, so that the GAC can respond promptly on publication. I will keep you informed of this notification to the GAC and any feedback that might be helpful, subject to the views of the GAC leadership group.

Regards

Tom
