“Consensus Policy” and the Picket Fence
ICANN-accredited registrars and registries are bound to ICANN by contracts -
http://www.icann.org/en/general/agreements.htm

In this context, "consensus Policy"* is a specification broadly supported by ICANN stakeholders, and thus could bind registrars and registries

* Need to refer to contracts for specific limitations & need to refer to Bylaws for overall scope issues.

This presentation does not constitute legal advice or a waiver or modification of any ICANN agreement
In its original agreements with ICANN, registries and registrars agreed to comply with “consensus” policies adopted by ICANN provided (i) that such policies did not unreasonably restrain competition and (ii) that the policies related to:

1. Issues for which uniform or coordinated resolution is reasonably necessary to facilitate interoperability, technical reliability and/or stable operation of the Internet or domain-name system;
2. Registry / registrar policies reasonably necessary to implement Consensus Policies relating to registrars/registries
3. Resolution of disputes regarding the registration of domain names (as opposed to the use of such domain names)

_Detailed topics subject to “Consensus Policy” are defined in the gTLD Registry and Registrar Agreements_
The general policy making authority granted to ICANN to preserve the stability and security of the DNS and the policy authority described in previous slide create a “picket fence” around ICANN’s authority.

ICANN could establish policy and/or best practices affecting issues outside the picket fence, but could not mandate registry and registrar compliance with such policies.
